Automatic Single Puller-

- 1) Puller track length: As per Customer requirement
- 2) Safety conveying track for trolley

In order to reduce bending and distortion, improve product quality rate in extrusion process, need to lead and pull the extruded profiles. The puller adopts AC motor driving, PLC control with high degree of automation, simple operation and stable performance. It cooperates with the hot saw and extrusion press to achieve linkage produce completely. The puller bed use H-section steel and square steel, with imports of AC motors, the pulling force can

be adjustment with different profiles and extrusion speed. We have two types of puller: chain transmission type and wire rope transmission type. Auto stacker transfer the aluminum profile from saw infeed table to aging heat frame. The whole progress is automatic, so the profile surface will maintain the good quality. Compare with the manual type, auto stacker can reduce the labor cost, reduce damage of profile and increase the production.
