

Aluminum Extrusion Billet Hot Top Casting System

A same level hot top casting machine connects many hot top crystallizers on a distribution tray that levels the molten aluminum in all crystallizers. As the filtered molten aluminum is level on the casting table and flows under the first oxidation film, secondary pollution and metal oxidation loss are prevented.

Technical Parameter-

Hot-Top $\phi 60$ mm to $\phi 320$

No. of mold: As per requirement

Length: 6 Meters (As per requirement)

Hot-top allocation: Caster (steel sealing wire system)

AC electrical machine and steel wire Winch travelling block mechanism. System is set with protect mechanism and Hydraulic anti-plate system.
